Application/Control Number: 09/849,594

Art Unit: 1771

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/9/04 has been entered.

- 2. Claims 1, 3-10, 12-16, 18-29, 31-32 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification as originally filed does not provide support for the limitation that the seal is "non-releasable".
- 3. Claims 1, 3-10, 12-16, 18-29, 31-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what is meant by the limitation "such that the strength of the seal is optimized". What strength would be considered optimal? What criteria is used in determining what strength is optimal?
- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

<sup>(</sup>a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/849,594

Art Unit: 1771

- 5. Claims 1, 3-10, 12-16, 18-29, 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0677284 A1 to Kielpikwski in view of Bridges, U.S. Patent No. 5,624,240. EP '284 discloses a bonded containment flap which may comprise first and second heat fusible layers, (col. 3, lines 12-16). The first and second layers may comprise nonwovens, films, and laminates of the two, (col. 6, lines 9-19). The layers can be either liquid pervious or liquid impervious (col. 6, lines 37-55). The layers may be bonded by point bonds which may be formed by ultrasonic bonding. (col. 10, lined 4-9). Figure 4 shoes a bond pattern which comprises at least three parallel rows of thermal bond points 25 which are at the edge 12 of the flap. The bond points are offset relative to each other and each row comprises at least one bond point which is equally distant from at least three other bond points. Although EP '284 teaches that the bonds can comprise any patterns and shape, it does not specifically teach the claimed spacing. Bridges teaches that the size, shape and spacing of bond points may be selected through the process of routine experimentation in order to arrive at a bond which has the desired strength. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected the size, spacing and shape of the bond points of EP '284 through the process of routine experimentation in order to arrive at a bond which had the desired strength.
- 6. Applicant's arguments have been fully considered but are moot in view of the new grounds of rejection.

Application/Control Number: 09/849,594

Art Unit: 1771

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (571) 272-1475. The examiner may be reached between 6:30 AM and 6:00 PM Monday through Wednesday, and 6:30 AM and 2 PM on Thursday.

Mr. Terrel Morris, the examiner's supervisor, may be reached at (571) 272-1478.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

The fax number for all official faxes is (703) 872-9306.
